

W5GAD multi-page static site

This package contains a plain HTML/CSS/JS site with separate pages and Docker support.

Files

- `index.html`
- `whatshappening.html`
- `community.html`
- `ourclub.html`
- `equipment.html`
- `education.html`
- `styles.css`
- `site.js`
- `Dockerfile`
- `nginx.conf`
- `fly.toml`
- `.nojekyll`

Local preview with Docker

```
docker build -t w5gad-static .  
docker run --rm -p 8080:8080 w5gad-static
```

Open <http://localhost:8080>

Deploy to [Fly.io](https://fly.io)

```
fly launch --no-deploy  
fly deploy
```

Adjust `app =` in `fly.toml` to your actual app name.

Deploy to GitHub Pages

This is plain static HTML, so GitHub Pages can serve it directly. The `.nojekyll` file is included so GitHub Pages will not try to process the site with Jekyll.
